Do not lose your Born2BeRoot : get a ...

[Installing Debian](#) > [BONUS: Partition Disks](#)[Copy](#)

BONUS: logical volume manager

 **logical volume management** or **LVM**: provides a method of allocating space on [mass-storage](#)  devices that is more flexible than conventional [partitioning](#)  schemes to store volumes.

1. We will configure the logical volume manager.

```
[!!!] Partition disks

This is an overview of your currently configured partitions and mount points. Select a
partition to modify its settings (file system, mount point, etc.), a free space to create
partitions, or a device to initialize its partition table.

Guided partitioning
Configure software RAID
Configure the Logical Volume Manager
Configure encrypted volumes
Configure iSCSI volumes

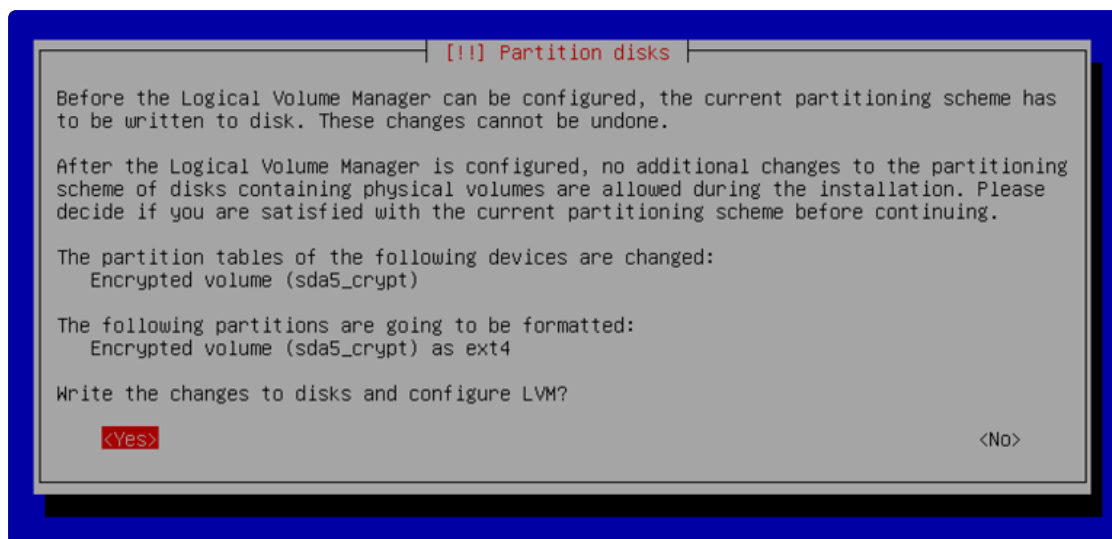

Encrypted volume (sda5_crypt) - 31.7 GB Linux device-mapper (crypt)
#1      31.7 GB  f  ext4
SCSI3 (0,0,0) (sda) - 32.2 GB ATA VBOX HARDDISK
#1 primary 499.1 MB  F  ext4    /boot
#5 logical  31.7 GB  K  crypto   (sda5_crypt)

Undo changes to partitions
Finish partitioning and write changes to disk

<Go Back>
```

Partition disks configuration on Debian

2. We will accept the confirmation message as we agree to save the changes to the disk.
