

Born2BeRoot G

Do not lose your Born2BeRoot : get a ...

[Installing Debian](#)[Copy](#)

Configure locals

1. We will choose the version without a graphical interface `Install` since the subject requires it. Press the `Enter` key to confirm anything, and use the `Arrow` keys to move around.

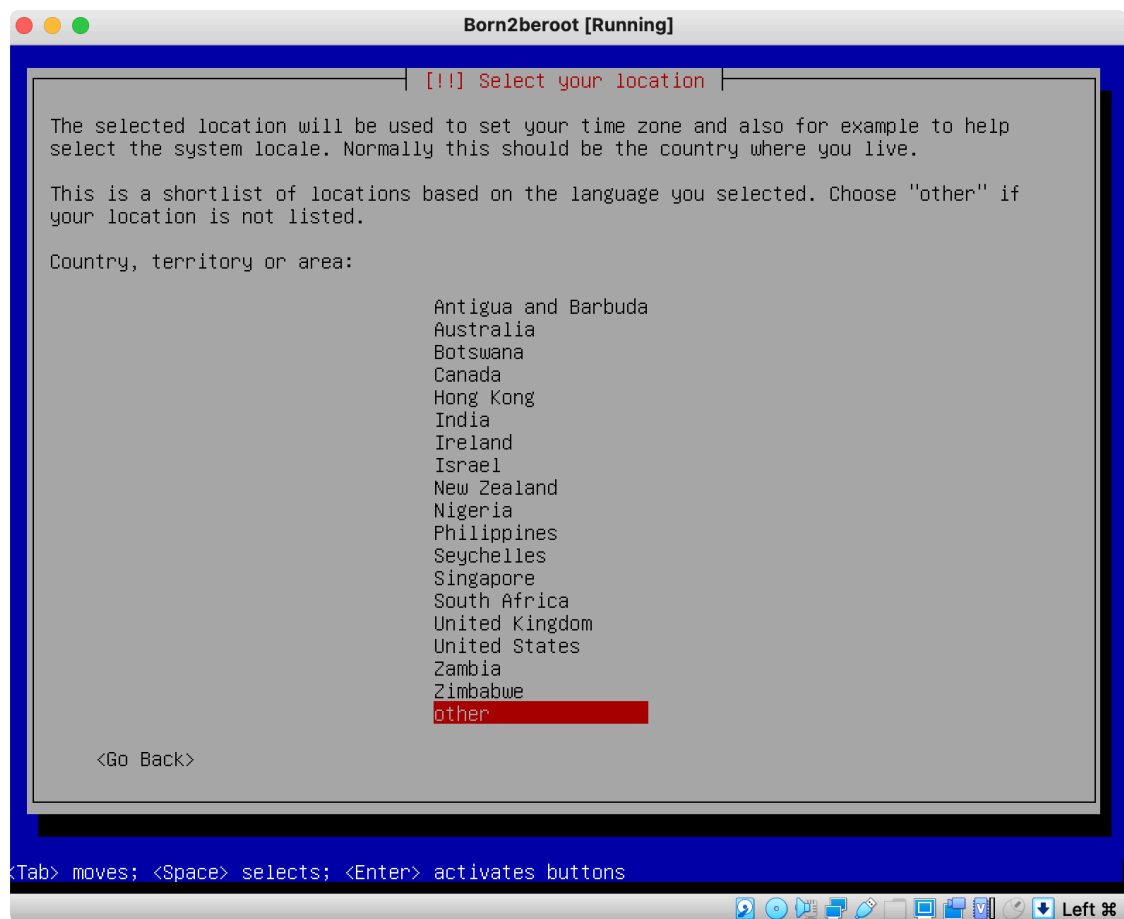

Dash board of Debian installation

2. Now the language must be chosen for the machine that will be present during the installation and as the default setting. Select `English`.

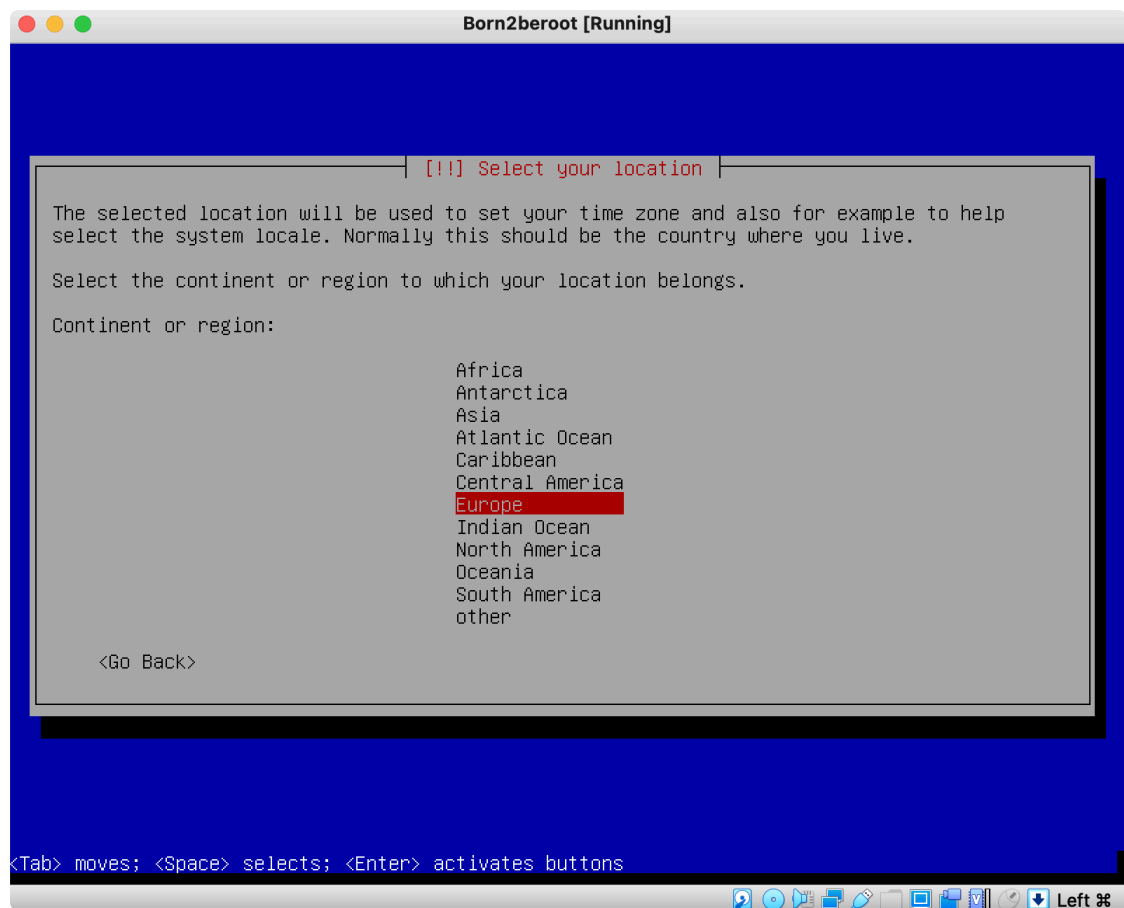

Debian language selection

- It's time to select the country. If yours is not on the present list, go to **Other**.

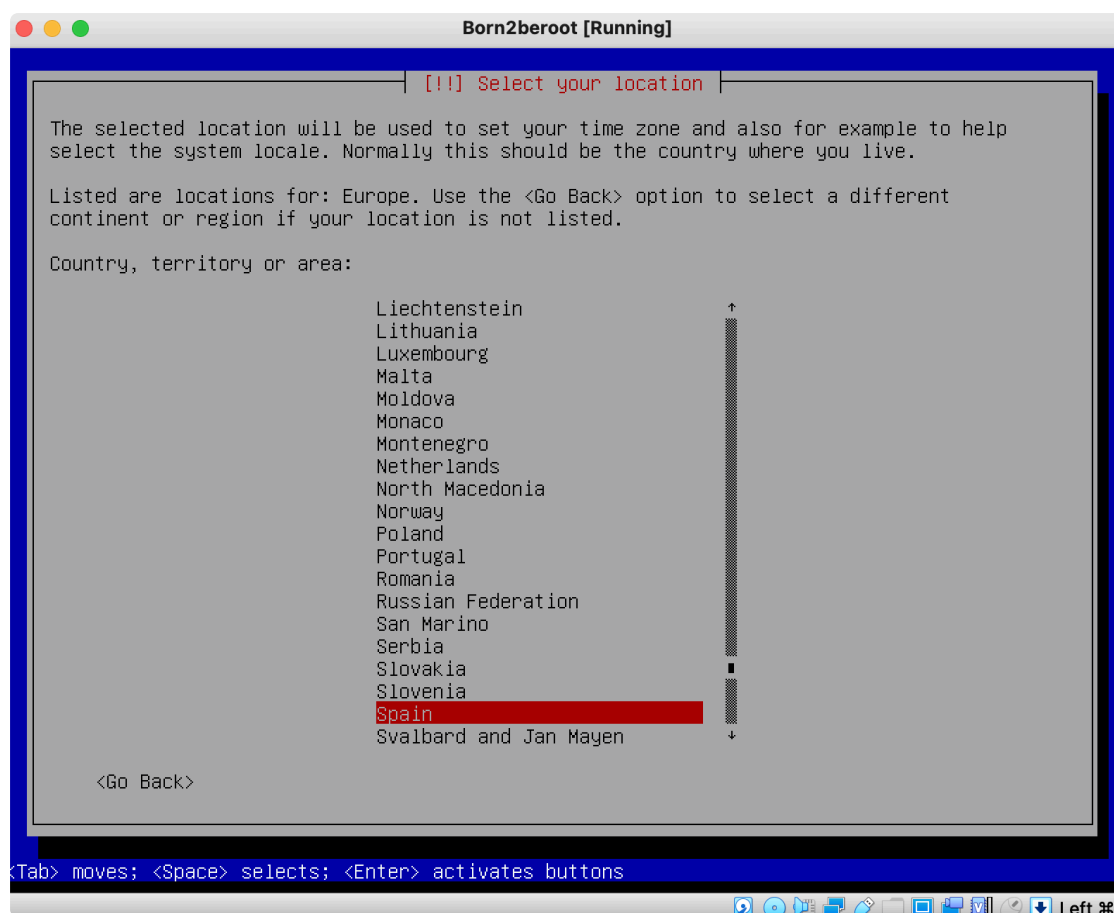

Debian location selection

4. Time to select continent. In our case we will select Europe .

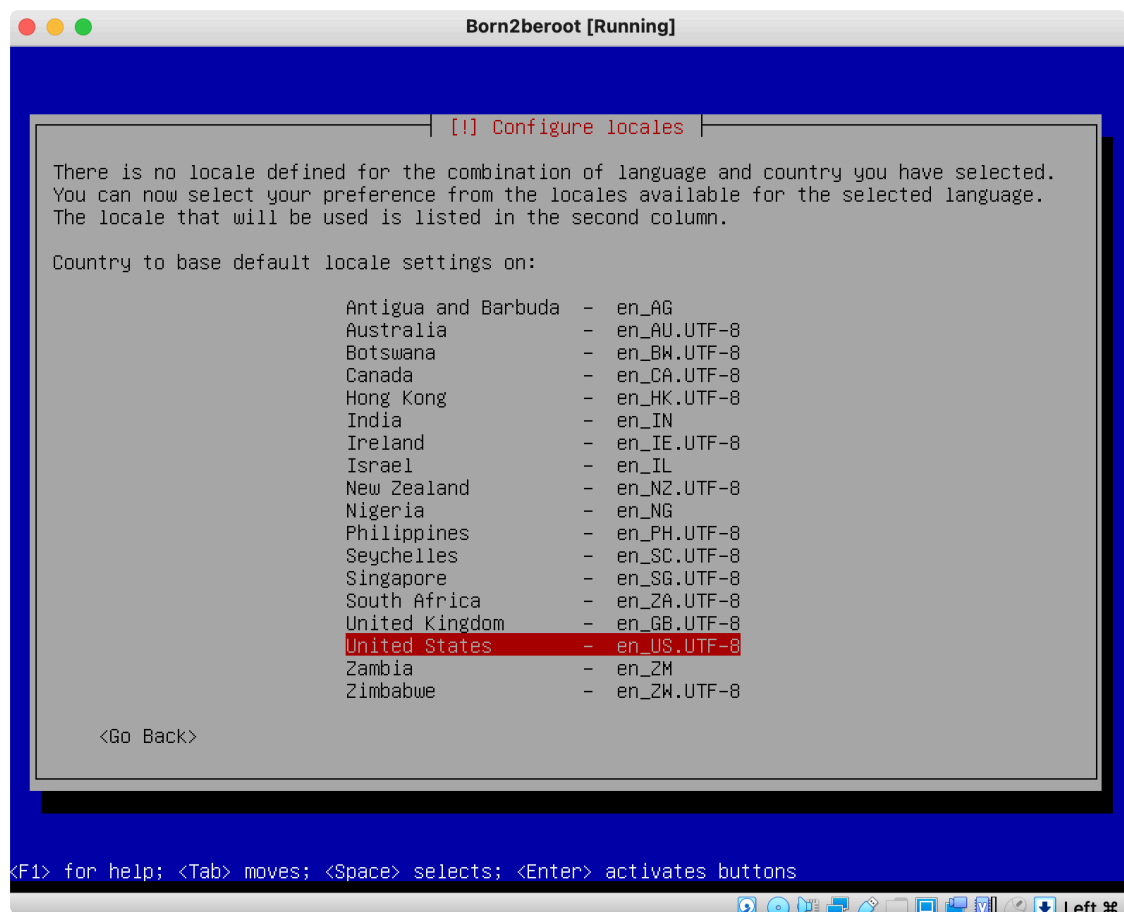

Debian location selection

5. Now select the country. In my case I will select Spain 🇪🇸.

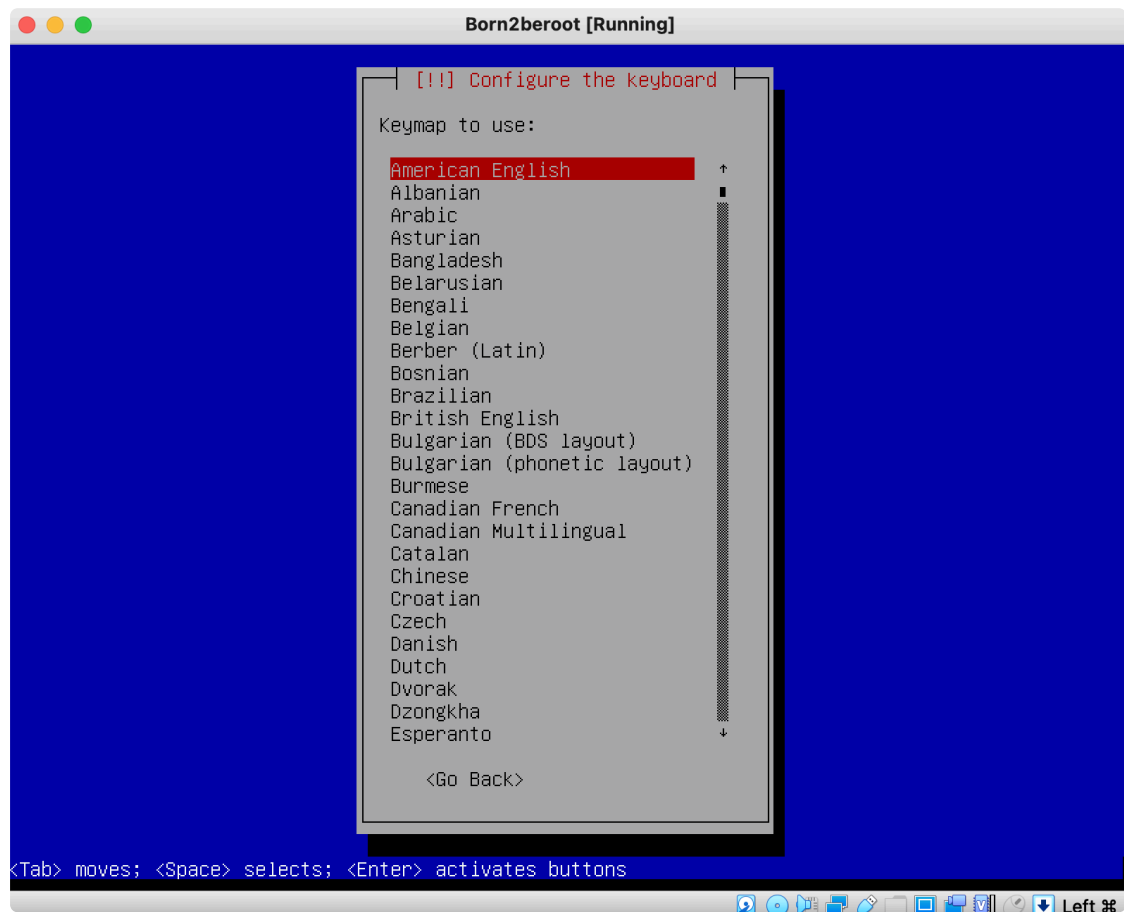

Debian location selection

6. Choose **United States**.

Debian location selection

7. This time it's turn for selecting a keymap. Our keyboard follows the ANSI standard so **American English**.
