

Born2BeRoot G

Do not lose your Born2BeRoot : get a ...

[Installing Debian](#)

Copy

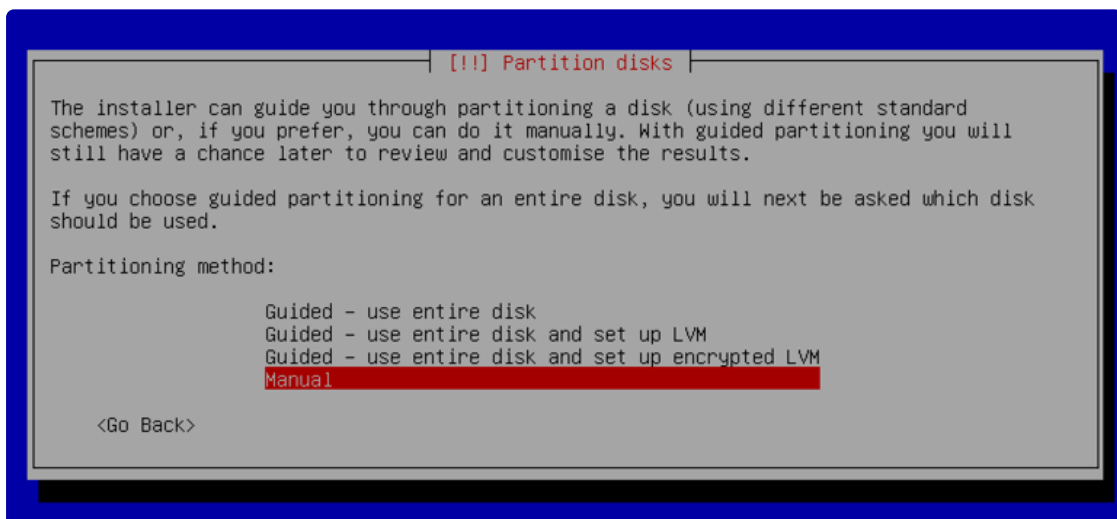

BONUS: Partition Disks

if your are not doing bonus part you can click on:

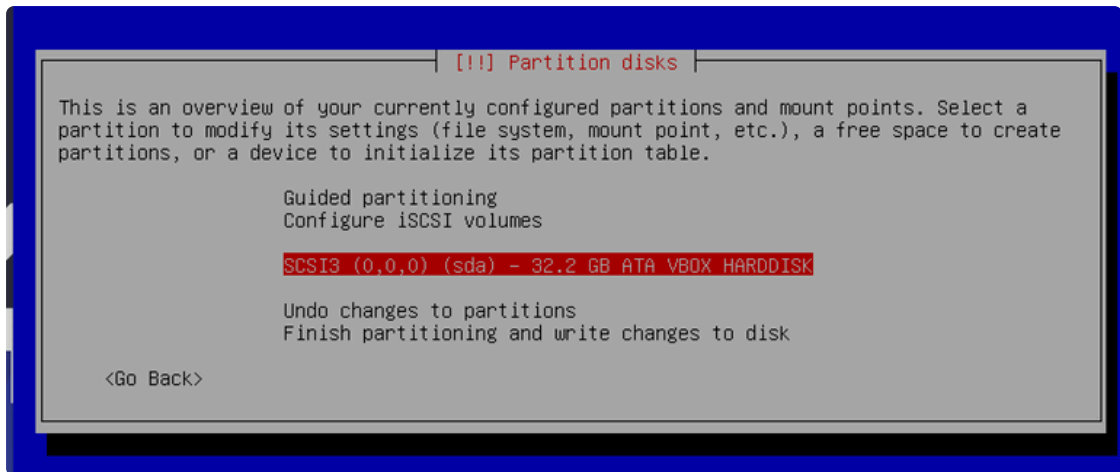

[Configure the package manager](#)

1. When choosing disk partitioning, we will select manual. This way we can edit the partitions one by one.

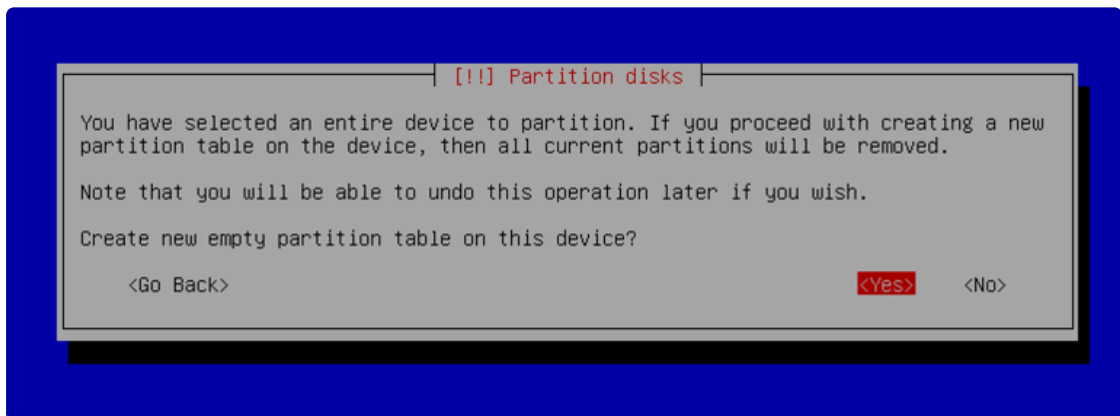

Partitions disk configuration on Debian

2. In this section, it shows us a general description of our partitions and mount points. Currently, we do not have any partitions. To create a new partition table, we must choose the device where we want to create them. In our case, we will choose the only one available.

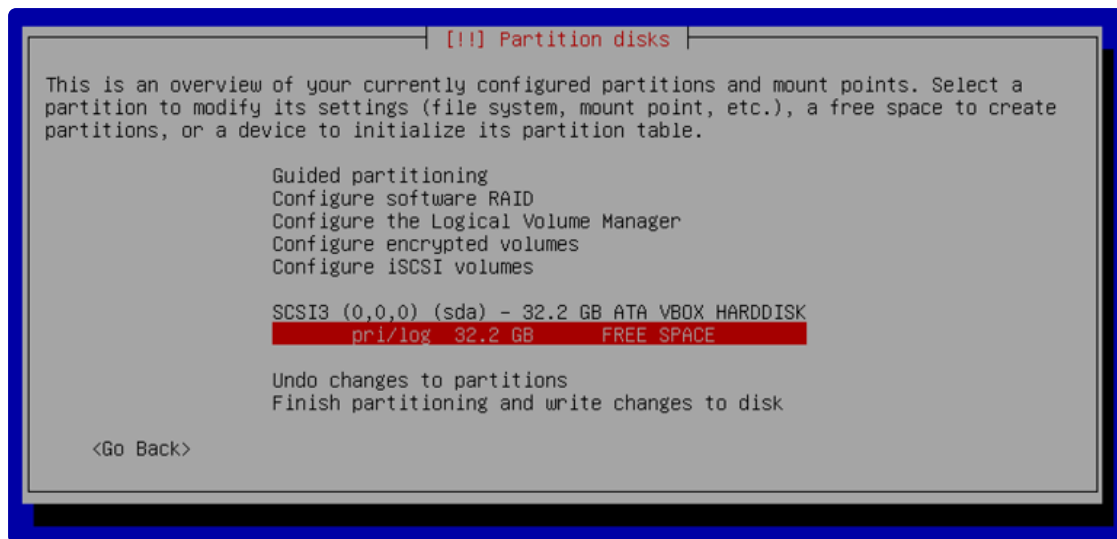

Partitions disk configuration on Debian

3. We accept the confirmation message. Basically, it warns us that if there are already partitions on the device, they will be deleted and that if we are sure to create a new empty partition table.

Partitions disk configuration on Debian

4. Once we have completed the previous step, we can see how our partition table appears empty. Now we must configure it, for this we must select it.
